Virtual Builder's Roundtable Mission

The Virtual Builders Roundtable is a group of designers, engineers, fabricators, and builders active in the development of virtual building processes and technologies to reduce the risks, costs, and time associated with today's construction environment. The mission of the group is to share knowledge among the members to improve the processes and technology to build virtually by creating 3D and 4D object models to simulate construction of all types of facilities. We also seek to educate the larger community of owners/operators/investors, designers, builders, suppliers, fabricators and specialty contractors about the benefits and implementation of virtual building.

Andy Fuhrman, Atul Khanzode, Chris Raftery, Daniel Gonzales, Dean Reed, Dianne Davis, Kathleen Liston, Ken Stowe, Martin Fischer,
